LISTERIA ANTIGEN, STOOL

Profile Details | 1 Parameters

Fasting: Fasting is not Mandatory | Report Time: Within 2 Days

Specimen Required: Stool

Price- ~~₹3800~~ **₹2598**

Parameters Included

About This Test

The Listeria Antigen, Stool test is a laboratory diagnostic test used to detect the presence of Listeria monocytogenes in a stool sample. This bacterium is responsible for causing listeriosis, a foodborne infection that can occur after consuming contaminated food such as unpasteurized dairy products, processed meats, or improperly stored food. The test works by identifying specific antigens (proteins) produced by the bacteria in the stool. It provides a rapid and reliable method for detecting infection, especially in the early stages. This test is often recommended for individuals experiencing symptoms like fever, diarrhea, nausea, vomiting, and abdominal discomfort, particularly when food poisoning is suspected. It is also important for high-risk groups such as pregnant women, elderly individuals, and people with weakened immune systems. A fresh stool sample is collected in a clean container and analyzed in the laboratory. No fasting is required, and proper sample handling ensures accurate results

98% On-Time Reports	**100% Sample Accuracy**	**Free Home Collection**	**Expert Doctors**	**750+ Lab Tests**
Available 24×7	NABL Certified Labs	Door-to-Door Pickup	Across India	Trusted & Reliable
