About This Test

A microalbumin urine spot test measures the amount of albumin, a protein, in a small urine sample. Elevated levels of albumin in the urine, known as microalbuminuria, can indicate early kidney damage, often associated with conditions like diabetes and hypertension. Detecting microalbuminuria helps in the early identification and management of kidney disease, enabling timely intervention to prevent progression to more severe kidney damage or chronic kidney disease. Regular monitoring is cruci for patients at risk of kidney issues.

98% On-Time Reports	**100% Sample Accuracy**	**Free Home Collection**	**Expert Doctors**	**750+ Lab Tests**
Available 24×7	NABL Certified Labs	Door-to-Door Pickup	Across India	Trusted & Reliable

**Fasting 10–12 hrs essential | *Limited Period Offer | *Reports within Same Day*
