About This Test

A P-ANCA (Perinuclear Anti-Neutrophil Cytoplasmic Antibodies) test measures the presence of specific autoantibodies that target proteins in the cytoplasm of neutrophils, type of white blood cell. These autoantibodies are often associated with autoimmune vasculitis, particularly microscopic polyangiitis and ulcerative colitis. The test helps in diagnosing and monitoring these autoimmune conditions by detecting the characteristic antibodies that indicate inflammation of blood vessels. It aids in distinguishing between different types of vasculitis and related disorders.
