About This Test

The MTB DNA PCR test measures the presence of DNA from *Mycobacterium tuberculosis* (MTB) in a sample. This polymerase chain reaction (PCR) test is used to detect the genetic material of the bacteria responsible for tuberculosis (TB). It is a highly sensitive and specific method for diagnosing TB, especially in cases where conventional tests, like sputum smear microscopy or culture, are inconclusive. A positive result indicates an active TB infection, allowing for timely treatment and management.

98% On-Time Reports	**100% Sample Accuracy**	**Free Home Collection**	**Expert Doctors**	**750+ Lab Tests**
Available 24×7	NABL Certified Labs	Door-to-Door Pickup	Across India	Trusted & Reliable

**Fasting 10–12 hrs essential | *Limited Period Offer | *Reports within Within 4 Days*
