About This Test

The Mumps IgG antibodies test measures the level of immunoglobulin G (IgG) antibodies against the mumps virus in the blood. IgG antibodies are produced by the immun system in response to an infection or vaccination. High levels of Mumps IgG antibodies indicate either a past infection with the mumps virus or that the individual has bee vaccinated and developed an immune response. This test is used to confirm immunity to mumps, differentiate between recent and past infections, and determine if additional vaccination or other medical interventions are needed. It is particularly useful in assessing immunity in individuals with symptoms of mumps or in outbreak settings.

98% On-Time Reports	**100% Sample Accuracy**	**Free Home Collection**	**Expert Doctors**	**750+ Lab Tests**
Available 24×7	NABL Certified Labs	Door-to-Door Pickup	Across India	Trusted & Reliable
