About This Test

NT-proBNP (N-terminal pro b-type natriuretic peptide) is a blood test that measures the levels of NT-proBNP, a substance produced in the heart and released into the bloo when the heart is under stress or working hard to pump blood. Elevated levels of NT-proBNP indicate heart failure or other cardiac conditions, such as left ventricular dysfunction. This test is used to help diagnose heart failure, assess its severity, and monitor the effectiveness of treatment. It is also useful in distinguishing between cardiac and non-cardiac causes of symptoms like shortness of breath.
