About This Test

The Parietal Cell Antibody (PCA) test detects antibodies directed against parietal cells, which are found in the lining of the stomach. These antibodies are primarily associated with autoimmune conditions such as autoimmune gastritis and pernicious anemia. Parietal cells produce intrinsic factor, essential for vitamin B12 absorption. Autoimmune gastritis can lead to vitamin B12 deficiency due to impaired intrinsic factor production. The PCA test helps diagnose autoimmune gastritis and pernicious anemia, guiding appropriate treatment to manage symptoms and prevent complications associated with vitamin B12 deficiency.
