

# PCOD PANEL BASIC

Profile Details | 8 Parameters

Fasting: Overnight Fasting For 9-10 Hours | Report Time: Same Day

**Specimen Required:** Blood

Price- ₹4000 **₹1699**

## Parameters Included

- CBC
- FBS- Fasting Blood Sugar
- LH
- FSH
- PRL
- TESTOSTERONE
- INSULIN FASTING
- TSH

## About This Test

**\*\*PCOD Panel\*\*** (Polycystic Ovarian Disease Panel) is a group of diagnostic blood tests designed to evaluate hormonal imbalances and metabolic issues commonly associated with PCOD. PCOD affects women of reproductive age and is characterized by irregular menstrual cycles, weight gain, acne, excessive hair growth, and infertility. The PCOD Panel typically includes tests like **\*\*LH** (Luteinizing Hormone), **FSH** (Follicle Stimulating Hormone), Prolactin, Testosterone (Total ), **TSH** (Thyroid-Stimulating Hormone)**\*\***, and **\*\*Insulin or Blood Sugar levels\*\***. Sometimes, additional tests like and **\*\*Pelvic Ultrasound\*\*** may be recommended for further diagnosis. These tests help doctors assess ovarian function, rule out thyroid or pituitary disorders, and plan effective treatment strategies including lifestyle changes, medications, and fertility support. Early diagnosis and management of PCOD are crucial to prevent complications like type 2 diabetes, endometrial issues, and infertility. Regular follow-ups and a healthy lifestyle play a key role in managing PCOD.
