PLATELET COUNT -P/C

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ~~₹299~~ **₹140**

Parameters Included

About This Test

A platelet count measures the number of platelets (thrombocytes) in a given volume of blood. Platelets are small, disc-shaped cell fragments that play a crucial role in blood clotting and wound healing. They help prevent excessive bleeding by aggregating at sites of blood vessel injury and forming a clot. The platelet count is a standard part of a complete blood count (CBC) test and is used to evaluate various conditions related to blood clotting. Abnormal platelet counts can indicate a range of medical issues: - **Low Platelet Count (Thrombocytopenia):** Can be caused by conditions such as bleeding disorders, certain infections, or bone marrow disorders. - **High Platelet Count (Thrombocytosis):** May be associated with inflammation, infection, or bone marrow disorders. Monitoring platelet count helps diagnose and manage these conditions and assess overall blood health.
