PSA FREE - PROSTATE SPECIFIC ANTIGEN ,FREE

Profile Details | 1 Parameters

Fasting: Fasting not mandatory | Report Time: Next day

Specimen Required: Blood

Price- ~~₹1099~~ **₹699**

Parameters Included

About This Test

Free prostate-specific antigen (PSA) measures the amount of PSA protein in the blood that is not bound to other proteins, such as alpha-1-antichymotrypsin. This test is used in conjunction with total PSA (which includes both free PSA and PSA bound to other proteins) to calculate the percentage of free PSA relative to total PSA. The measurement of free PSA is particularly useful in prostate cancer screening and diagnosis. A higher percentage of free PSA relative to total PSA is often associated with benign prostate conditions, such as benign prostatic hyperplasia (BPH), whereas a lower percentage may indicate a higher risk of prostate cancer. This information helps healthcare providers assess the likelihood of prostate cancer and make decisions about further diagnostic testing, such as prostate biopsy, in men with elevated total PSA levels. Understanding the ratio of free PSA to total PSA helps improve the accuracy of prostate cancer detection and reduces unnecessary biopsies in cases where cancer risk is low.

98% On-Time Reports	**100% Sample Accuracy**	**Free Home Collection**	**Expert Doctors**	**750+ Lab Tests**
Available 24×7	NABL Certified Labs	Door-to-Door Pickup	Across India	Trusted & Reliable

**Fasting 10–12 hrs essential | *Limited Period Offer | *Reports within Next day*
