About This Test

A reticulocyte count measures the number of reticulocytes, which are immature red blood cells, in the blood. This test helps evaluate bone marrow function and red blood cell production. It is used to diagnose and monitor conditions such as anemia, bone marrow disorders, and the body's response to treatments like chemotherapy or erythropoietin therapy. High reticulocyte counts can indicate increased red blood cell production, while low counts may suggest bone marrow failure or insufficient production.
