About This Test

A Rubella virus IgG avidity test measures the strength of the bond between IgG antibodies and the rubella virus. High avidity indicates a past infection or long-term immunity, while low avidity suggests a recent infection. This test helps distinguish between recent and past rubella infections, which is crucial during pregnancy to assess the risk of congenital rubella syndrome in the fetus. It aids in appropriate clinical management and decision-making for pregnant women exposed to rubella.

98% On-Time Reports	**100% Sample Accuracy**	**Free Home Collection**	**Expert Doctors**	**750+ Lab Tests**
Available 24×7	NABL Certified Labs	Door-to-Door Pickup	Across India	Trusted & Reliable
