About This Test

A sodium test measures the concentration of sodium in the blood. Sodium is an essential electrolyte that helps regulate water balance, nerve function, and muscle contraction. Abnormal sodium levels can indicate various health issues: hyponatremia (low sodium) can result from conditions like dehydration, kidney disease, or heart failure, while hypernatremia (high sodium) may be due to excessive fluid loss, certain medications, or endocrine disorders. Monitoring sodium levels is crucial for diagnosing and managing these and other related conditions.
