STONE ANALYSIS

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Urine

Price- ~~₹1500~~ **₹899**

Parameters Included

About This Test

A stone analysis, often performed on kidney stones or gallstones, involves examining the composition of the stones to determine their chemical makeup. This analysis helps identify the type of stones, such as calcium oxalate, uric acid, or struvite. Understanding the stone composition is crucial for diagnosing the underlying cause of ston formation and guiding appropriate treatment and prevention strategies. The results can help tailor dietary recommendations, medication, and other interventions to reduc the risk of future stone formation.

98% On-Time Reports	**100% Sample Accuracy**	**Free Home Collection**	**Expert Doctors**	**750+ Lab Tests**
Available 24×7	NABL Certified Labs	Door-to-Door Pickup	Across India	Trusted & Reliable

**Fasting 10–12 hrs essential | *Limited Period Offer | *Reports within Same Day*
