STOOL HANGING DROP

Profile Details | 1 Parameters

Fasting: Fasting is not Mandatory | Report Time: Same day

Specimen Required: Stool

Price- ~~₹799~~ **₹349**

Parameters Included

About This Test

The Stool Hanging Drop Test is a microscopic examination used to observe the motility of microorganisms present in a stool sample. In this method, a small drop of fresh stool is placed on a glass slide and suspended under a coverslip, creating a “hanging drop” preparation. This allows laboratory professionals to examine live organisms under a microscope. The test is mainly used to detect motile parasites such as Giardia lamblia, which move actively and can be identified by their characteristic motion. It is particularly useful in cases of acute diarrhea or suspected parasitic infections. A fresh stool sample is essential because the movement of organisms decreases over tim which may affect the accuracy of the results. This test provides rapid and direct observation, making it helpful for early diagnosis. No fasting is required before the test. Proper and timely sample collection ensures reliable results and aids in appropriate treatment.

98% On-Time Reports	**100% Sample Accuracy**	**Free Home Collection**	**Expert Doctors**	**750+ Lab Tests**
Available 24×7	NABL Certified Labs	Door-to-Door Pickup	Across India	Trusted & Reliable

**Fasting 10–12 hrs essential | *Limited Period Offer | *Reports within Same day*
