# TESTOSTERONE TOTAL

Profile Details | 1 Parameters

Fasting: Fasting not mandatory | Report Time: Same day

**Specimen Required:** Blood

**Price-** ~~₹899~~ **₹499**

## Parameters Included

## About This Test

A testosterone test measures the level of testosterone, a primary sex hormone, in the blood. Testosterone is produced mainly by the testes in men and in smaller amount by the ovaries in women and adrenal glands in both sexes. - **Men**: Testosterone is crucial for the development of male reproductive tissues, secondary sexual characteristics (e.g., muscle mass, deep voice), libido, and sperm production. Low levels can indicate hypogonadism, infertility, or other health issues. - **Women**: Testosterone contributes to bone strength, muscle mass, and libido. Elevated levels can indicate conditions like polycystic ovary syndrome (PCOS) or adrenal disorders. Measuring testosterone levels helps diagnose and manage conditions related to hormonal imbalances, reproductive health, and overall well-being.
