

THYROGLOBULIN -TG

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ₹960 **₹589**

Parameters Included

About This Test

Thyroglobulin (TG) is a protein produced by the thyroid gland and is a key component in the production of thyroid hormones. The Thyroglobulin (TG) test measures the level of this protein in the blood. - ****Elevated levels of TG**** can indicate thyroid gland abnormalities, such as thyroid cancer, especially in patients who have had thyroid cancer treatment or surgery. It can be used to monitor disease recurrence or progression. - ****Low or normal levels of TG**** are generally considered normal and can be used to assess the effectiveness of thyroid cancer treatment or surgery. The TG test is particularly useful for tracking changes in patients with a history of thyroid cancer or certain thyroid disorders, helping to evaluate treatment response and disease status.
