About This Test

A triiodothyronine (T3) test measures the level of the T3 hormone in the blood. T3 is one of the two main hormones produced by the thyroid gland, the other being thyroxine (T4). T3 plays a crucial role in regulating the body's metabolism, affecting processes such as heart rate, body temperature, and energy production. - **High T3 levels** can indicate hyperthyroidism, where the thyroid is overactive, leading to symptoms like weight loss, rapid heartbeat, and anxiety. - **Low T3 levels** may sugges hypothyroidism, where the thyroid is underactive, causing symptoms like weight gain, fatigue, and depression. The T3 test helps diagnose and monitor thyroid disorders, ensuring proper thyroid function and metabolic regulation.
