Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Within 2 Days

Specimen Required: Blood

Price- ~~₹3000~~ **₹1650**

Parameters Included

About This Test

A **triple marker test** is a prenatal screening performed during the second trimester of pregnancy to assess the risk of certain genetic conditions in the fetus. It measure three substances in the mother's blood: alpha-fetoprotein (AFP), human chorionic gonadotropin (hCG), and estriol. The test helps evaluate the risk of conditions such as Down syndrome, Trisomy 18, and neural tube defects. Although not diagnostic, abnormal results may lead to further testing, like amniocentesis, to confirm any findings.
