

TROPONIN T - QUALITATIVE

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Same Day

Specimen Required: Blood

Price- ₹1899 **₹995**

Parameters Included

About This Test

A troponin T qualitative test measures the presence of troponin T proteins in the blood, indicating heart muscle damage. Troponin T is released into the bloodstream when the heart muscle is injured, such as during a heart attack. The qualitative test doesn't quantify the amount but confirms if troponin T is detectable, helping diagnose acute coronary syndromes and other heart conditions. It's a crucial early indicator in emergency settings for evaluating patients with chest pain.
