About This Test

The TTG/DGP test measures the levels of antibodies against tissue transglutaminase (TTG) and deamidated gliadin peptides (DGP) in the blood. These antibodies are markers for celiac disease, an autoimmune disorder where the ingestion of gluten triggers an immune response that damages the small intestine. Elevated levels of TTG and DGP antibodies indicate a positive result for celiac disease. This test is crucial for diagnosing the condition and differentiating it from other gastrointestinal disorders.
