URINE CULTURE

Profile Details | 1 Parameters

Fasting: Fasting required | Report Time: Within 48-72 hours (3 Days)

Specimen Required: Urine

Price- ₹799 ₹399

Parameters Included

About This Test

A urine culture measures the presence and type of bacteria or other microorganisms in the urine. It helps diagnose urinary tract infections (UTIs) by identifying the specific pathogen causing the infection and determining its sensitivity to antibiotics. The test involves growing a urine sample in a lab to see which organisms thrive. Results guid appropriate antibiotic treatment and help manage infections effectively. It can also detect rare pathogens that might not be identified with standard urine tests.
