About This Test

A urine dysmorphic red blood cell (RBC) test measures the presence and percentage of abnormally shaped red blood cells in the urine. Dysmorphic RBCs are indicative of glomerular damage in the kidneys, often seen in conditions such as glomerulonephritis or kidney injury. These cells differ in shape from normal RBCs due to the damage a they pass through the kidney's filtering system. The presence of dysmorphic RBCs helps in diagnosing and assessing the severity of kidney-related disorders.
