

URINE POTASSIUM

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Urine

Price- ₹350 ₹170

Parameters Included

About This Test

A **urine potassium** test measures the concentration of potassium in a urine sample. Potassium is an essential electrolyte that plays a key role in various bodily functions, including maintaining fluid balance, nerve function, and muscle contraction. Here's what the test assesses: 1. **Electrolyte Balance**: Helps evaluate the body's potassium balance and overall electrolyte status. Abnormal levels can indicate issues with potassium regulation. 2. **Kidney Function**: Assesses how well the kidneys are regulating potassium levels. The kidneys filter excess potassium from the blood into the urine. 3. **Diagnosis and Monitoring**: Aids in diagnosing and managing conditions related to abnormal potassium levels, such as: - **Hyperkalemia**: Elevated potassium levels in the blood, which may be due to kidney dysfunction or excessive intake. - **Hypokalemia**: Low potassium levels, which may be due to conditions like diarrhea, vomiting, or certain medications. 4. **Treatment Evaluation**: Monitors the effectiveness of treatments for conditions affecting potassium levels and adjusts treatment plans as needed. In summary, a urine potassium test measures potassium concentration in urine to help evaluate electrolyte balance, kidney function, and diagnose or monitor conditions related to abnormal potassium levels.
