

# URINE POTASSIUM

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

**Specimen Required:** Urine

Price- ₹350 **₹170**

## Parameters Included

### About This Test

A **urine potassium** test measures the concentration of potassium in a urine sample. Potassium is an essential electrolyte that plays a key role in various bodily functions, including maintaining fluid balance, nerve function, and muscle contraction. Here's what the test assesses:

- Electrolyte Balance:** Helps evaluate the body's potassium balance and overall electrolyte status. Abnormal levels can indicate issues with potassium regulation.
- Kidney Function:** Assesses how well the kidneys are regulating potassium levels. The kidneys filter excess potassium from the blood into the urine.
- Diagnosis and Monitoring:** Aids in diagnosing and managing conditions related to abnormal potassium levels, such as:
  - Hyperkalemia:** Elevated potassium levels in the blood, which may be due to kidney dysfunction or excessive intake.
  - Hypokalemia:** Low potassium levels, which may be due to conditions like diarrhea, vomiting, or certain medications.
- Treatment Evaluation:** Monitors the effectiveness of treatments for conditions affecting potassium levels and adjusts treatment plans as needed.

In summary, a urine potassium test measures potassium concentration in urine to help evaluate electrolyte balance, kidney function, and diagnose or monitor conditions related to abnormal potassium levels.
