

# URINE PROTEIN CREATININE RATIO

Profile Details | 1 Parameters  
Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Urine

Price- ₹499 **₹399**

## Parameters Included

### About This Test

The urine protein-to-creatinine ratio (UPCR) measures the amount of protein and creatinine in a urine sample, providing an estimate of daily protein excretion. It's a key test for detecting and monitoring kidney disease. Elevated UPCR levels indicate proteinuria, which can suggest kidney damage or dysfunction. The test is less influenced by urine concentration variations, making it a reliable method for assessing kidney health and function in both acute and chronic conditions.

**98% On-Time Reports**  
Available 24x7
