

# URINE PROTEIN ELECTROPHORESIS

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Within 5 Days

**Specimen Required:** Urine

**Price-** ₹1800   ₹890

## Parameters Included

### About This Test

Urine protein electrophoresis is a laboratory test that measures and identifies the different types of proteins present in urine. This test helps detect and evaluate abnormalities in protein levels, which can indicate various kidney and systemic diseases. During the test, a urine sample is subjected to an electric field, causing proteins to separate based on their size and charge. The resulting pattern of protein bands is then analyzed to identify the presence of specific proteins, such as albumin, immunoglobulins, and Bence Jones proteins. Urine protein electrophoresis is particularly useful in diagnosing and monitoring conditions like multiple myeloma, amyloidosis, and other plasma cell disorders. It can also help assess kidney function and detect proteinuria, which is a sign of kidney damage or disease. By identifying abnormal protein patterns, this test provides valuable information for diagnosis, prognosis, and treatment planning.

**98% On-Time Reports**  
Available 24x7

**95% Sample Accuracy**  
NABL Certified Labs

**Free Home Collection**  
Door-to-Door Pickup

**Expert Doctors**  
Across India

**750+ Lab Tests**  
Trusted & Reliable

\*Fasting 10-12 hrs essential | \*Limited Period Offer | \*Reports within Within 5 Days
