

VIRAL MARKER -3H /STD DETECTION PANEL -1 ,TRIPLE INFECTION -HIV HBSAG HCV
RAPID

Profile Details | 3 Parameters
Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ₹2250 ₹999

Parameters Included

- HIV 1 & 2 Rapid Test - (Human Immunodeficiency...
- HBsAg- Hepatitis B Surface Antigen (Rapid)
- Hepatitis C Virus (HCV Rapid)- Total Antibodies

About This Test

The HIV, HBsAg, and HCV rapid tests are diagnostic tools used to screen for different infectious diseases: 1. **HIV Rapid Test:** Detects the presence of antibodies to HIV the HIV antigen in blood, saliva, or urine. This test helps identify HIV infection, allowing for early diagnosis and prompt treatment. 2. **HBsAg Rapid Test:** Measures the presence of hepatitis B surface antigen (HBsAg) in the blood. A positive result indicates an active hepatitis B virus infection, which can be acute or chronic. 3. **HCV Rapid Test:** Detects antibodies to the hepatitis C virus (HCV) in the blood. A positive result suggests exposure to HCV, and further testing is needed to confirm a current infection and determine the appropriate treatment. All three tests are designed for quick results, usually within minutes, and are often used in health screening programs and point-of-care settings. Positive results typically require confirmation with more detailed laboratory tests.
