About This Test

The Vitamin D 25-OH (25-hydroxyvitamin D) test measures the level of 25-hydroxyvitamin D in the blood, which is the main form of vitamin D circulating in the body. This test helps assess vitamin D status to ensure adequate levels for bone health, immune function, and overall health. Low levels can indicate deficiencies leading to conditions like osteoporosis and rickets, while high levels might indicate excess supplementation or other health issues. It is a key indicator of vitamin D sufficiency.
